Voiceover box

The RB-MTV1 is a 1U rackmount designed to be used in voice-over booths. It has four inputs and two outputs with a mono microphone input on XLR with switched coarse gain and variable fine gain control from +20dB to +80dB. There is also a switched LF rumble filter, switched +48V phantom power and switched level limiting control. A rear-panel multi-turn preset pot allows adjustment of the threshold of the limiter. Microphone level is monitored by a 5-LED meter. There is a mono balanced Talkback input on XLR and two balanced XLR stereo inputs, Cue and programme, each with a 10dB input gain switch.

Each of the inputs can be mixed and monitored on the front and rear headphone outputs with individual volume controls. Which inputs are presented to the headphone outputs can be configured using two banks of DIP switches.
